# SC 12 FIREWOOD PROCESSOR

## THE WOODCHUCK DYNA SC-12 FIREWOOD PROCESSOR

The **WOODCHUCK** personal firewood processor can save your back and your pocketbook! You can cut and split that pile of pulpwood in a hurry! The **WOODCHUCK** is quick to set up, simple to operate and fun to use. The **WOODCHUCK** performs smoothly with the self-contained hydraulic system, powered by HONDA. The wood is loaded into the machine and advanced into the cutting position with the touch of a lever. The saw safely engages automatically when the operator initiates the cutting cycle. Watch your pulpwood melt into perfectly split firewood waiting for your stove!

WHERE LOG PROCESSING AND PROFITS MEET

# THE SC-12 IN ACTION:

1

2

3

4

5

1. Logs are driven from the live deck to the trough.
2. The trough drives the log forward to your desired length. A powerful clamp secures the log, and the hydraulic chainsaw cuts it to length.
3. Cut logs drop into the splitter to be split. (A two-way splitter is standard; four-way splitter is optional.)
4. All operations are performed from the control panel.
5. Power comes from a 13 HP Honda engine.
