

MODEL WP3000SM

WOOD-PRO POST & RAIL PROCESSOR

The WoodPro is virtually a rustic log shop in itself, with the ability to saw, drill, and cut tenons, points and domes--all in one unit. You can manufacture a wide variety of wood products, from log furniture to log railing to fence, with just this machine.

Each of the three functions--chopsaw, tenoner, and drill--are controlled by individual hand-operated clutches. And there's a bunch of options available for your woodPro, too: a sliding drill tray attachment with adjustable stop collars, an adjustable chopsaw stop, and air feed and clamps for the tenoner.
